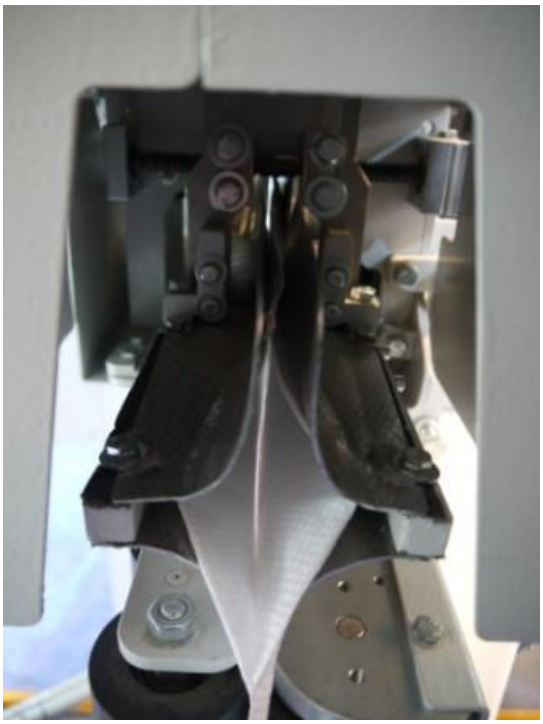
HAVER Group raises its profile in India

HAVER IBAU HAMBURG Pvt Ltd, the Indian subsidiary of Haver & Boecker, headquartered in Oelde, Germany, last month exhibited at the bC India (bauma CONEXPO) international construction machinery trade show which took place for the first time in Mumbai. The four-day event attracted 22,000 visitors from 69 countries. Under the motto "HAVER promotes automation" the company's RADIMAT® automatic bag applicator was introduced for the first time to the Indian market. Thanks to its innovative technology, this machine allows woven PP valve bags to be attached automatically to the spouts of rotating packing machines.



Visitors were also able to appreciate the advantages of the company's ROTO CLASSIC® rotary packing machines and the IBAU screw pump for conveying raw flour or carbon dust. Haver & Boecker's Wire Weaving Division presented various filter elements, the EML sieve analysis machine, and the CPA 2-1photo-optic particle analysis unit.

Dr Fabian Festge, managing director of HAVER IBAU INDIA, commented: "We had excellent discussions with potential customers from all over the world and saw a great deal of interest. We are now looking forward to successful post trade show business." www.haverboecker.com
