

### ***Vacuum mixer drier with conical floor***

Specialist German mixer manufacturer amixon, based in Paderborn, has introduced a new generation of vacuum mixer driers called the AMT series. They differ from earlier models in respect of their conical floor design. This feature offers the key advantage that complete and automatic self-emptying can be achieved with free-flowing materials. A further benefit is that mixing takes place even in the cone. This is achieved by means of a patented helical ribbon mixing tool which creates three-dimensional movement of the ingredients to be mixed. Not only the machine itself, but also the helical ribbon, mixing arms and mixing shaft are uniformly heated, a feature which ensures extremely fast, gentle and even drying. The vessel is both vacuum and pressure proof. [www.amixon.de](http://www.amixon.de)
