

Versatile and high-speed bagging of pet foods

At the beginning of July Bag Treatment Holland (BTH) completed the installation of an advanced bagging line for Jonker Petfood BV, the leading Dutch producer of dog and cat foods. It has been designed to handle tubular foil bags as well as single bags and the possibility of including additional sealing methods at a later stage has also been taken into consideration. In order to reach the required capacity of at least 1000 bags/h, Eersel-based BTH developed improvements to the existing bag placing arms for open-mouth bags. All machine settings are carried out via a touch screen with a graphic interface. Even conversions to a different type of bag are fully automated and are carried out via the touch screen. Scope of supply also included an integrated BTH palletiser. www.bth-bv.com
