

### ***One-day focus on high-containment powder transfer***

ChargePoint Technology will be hosting an open day on 14 September at its new facility in Liverpool, UK. Apart from celebrating the opening of its advanced new in-house manufacturing operation, the event will provide the occasion for the company to introduce its latest split valve technology. With the theme 'Innovation in contained transfer technology' the company aims to inform existing and new customers about its latest advances. "A great deal has happened at ChargePoint over the last year with some exciting new product developments coupled with a new manufacturing facility and set up of new offices in Europe and North America", explained marketing manager Ben Wylie. A series of concise presentations from guest speakers will highlight how users have evaluated the company's contained transfer devices and solved containment challenges by means of split valve systems.
