

Advanced packing system for animal bedding

The Nottingham-based UK arm of Chronos BTH, headquartered in the Netherlands, recently completed the installation and commissioning of a new turnkey packing system at the Wrexham plant of R A & C E Platt, a leading supplier of wood shavings and sawdust used as animal bedding for horses, cattle and other livestock. A tubular form-fill-seal (FFS) bagging machine, with a peak capacity of 400 bags/h, receives products from a volumetric feeder. The filled bags are fed via a conveying system into a high-level palletiser and the loaded pallets are wrapped with a Rainbow stretch-hooder. An additional conveying system was supplied that allows bags and bales from other packing systems to be fed into the same stretch-hooder. www.chronosbth.com
