

## ***Process weighers destined for Mexican flour mill***

Chronos BTH Ltd, the UK arm of the Netherlands-based parent company, has won an order to supply two of its innovative CHRONO-WEIGH™ APW process weighers to a flour mill in Mexico. The two units will each be fitted with 170-litre capacity weigh hoppers and two position infeed catch-gates. One will be used for controlling grain being fed into the mill, whilst the second APW will be used for monitoring flour outputs. All APW weighers are designed for simple integration into new or existing mills and are capable of freestanding operation. The latest version features a three-point ATEX-compliant load cell system, which ensures that weighing accuracy in the mill is not compromised whatever the product being monitored, extracted, controlled or totalised. Their compact design includes integral feedgate and discharge doors. [www.chronosbth.com](http://www.chronosbth.com)
