

Contract to upgrade Malaysian weigh belt feeders

The Nottingham, UK, arm of Chronos BTH reports that it has won a £1M-plus order to upgrade a fertiliser blending plant in Malaysia. This will involve replacing a series of weigh belt feeders that had originally been supplied by Richard Simon Ltd (RSL) more than 15 years ago. One of the main factors that enabled Chronos BTH to secure the contract was its access to the original project files and original RSL design authority documentation and drawings which have been owned by Chronos following its acquisition of RSL in early 2003. The upgraded machines are being produced as exact mechanical replacements to the previously supplied feeders. All the feeder frames are being replaced with fertiliser-grade stainless steel housings and material contact parts. www.chronosbth.com
