

Advanced grain intake and outloading system

The UK arm of Chronos BTH, working in association with Marlborough-based milling consultancy BK Grain Handling Engineers, has supplied a new bulk weighing system to Fisherton Manor Farm near Warminster, Wiltshire. The system records the intake of grains and seeds into the farm's grain store and controls the allocation of the grains to the correct

storage silo. By utilising different in-plant conveying routes, the same bulk throughput weigher outloads treated grain by controlling delivery of batches of weighed grain to trucks. The key elements of the weighing installation are a CHRONO-WEIGH™AW301 weigher and the Weights & Measures approved BULK 8000 weighing controller. This well proven combination can operate at rates up to 140t/h.
