

## ***Specialist PVC compounder installs another advanced bagging weigher***

The UK arm of Netherlands-based Chronos BTH recently supplied specialist PVC compounder Dugdale with its seventh CHRONO-WEIGH™ E55 bagging weigher for installation at its Sowerby Bridge, West Yorkshire, production plant. The latest gravity-fed E55 weigher, with stainless steel contact parts, was supplied on a tailor-made support framework. To provide Dugdale with optimum levels of flexibility for its packing operation, the new system has a 'push-pull' discharge chute configuration which allows precision individual weighments to be made into valve bags, or multi-tip precision weighments to be made into IBCs. Control of the bagging process is achieved using a SpeedAC NXT high-accuracy weighing controller. [www.chronosbth.com](http://www.chronosbth.com)
