

Easy-clean sliding mixer offers better accessibility to adjacent equipment

Dinnissen Process Technology, Sevenum, the Netherlands, has introduced the Slide Pegasus Mixer which adds new and exceptionally useful functionality to its well established range of Pegasus mixers. Not only are the mixing shafts of a sliding design to allow rapid and thorough cleaning, but the purpose-designed guide track system allows the complete mixer to be effortlessly slid out of the way as a complete unit. This feature provides optimum access to all the production equipment close to the mixer for cleaning, inspection and maintenance.

Different mixer variants have been created in order to spray 10-18 different fluids on bulk products, to meter with extreme precision and to mix tiny quantities or very large volumes of material. This new equipment will be exhibited on the Dinnissen stand (7-463) at Powtech, Nuremberg, 11-13 October. www.dinnissen.nl
