

Dynamic Air launches vibratory equipment

Dynamic Air, St. Paul, MN, has introduced the new Kraus line of vibratory equipment, including Stedi-Flex vibratory conveyors, to complement its comprehensive selection of pneumatic conveying systems as well as other bulk handling/processing equipment. Stedi-Flex vibratory conveyors are available with a counterbalanced base specially designed to isolate the counteracting forces produced in conventional vibratory conveyors. With a choice of mild steel or stainless steel construction, they are offered in a wide range of sizes and are

particularly suitable for feeding materials of lighter bulk density. A dust-tight cover is optionally available. A working model will be shown at the PTXi Powder & Bulk Solids show which takes place 4-6 May in Rosemont, IL, where Dynamic Air will also be demonstrating models of the Kraus Gyro loss-in-weight feeder and the L-Series air-operated vibratory feeder. In Europe this equipment is available from the company's Milton Keynes, UK, subsidiary. www.dynamicair.com
