

## ***Ebbecke provides advanced techniques for contract fine grinding***

Ebbecke Verfahrenstechnik, headquartered close to Frankfurt/Main, Germany, has become one of Europe's most successful bulk material contract processing specialists. A new fine grinding centre has been commissioned for production of particle sizes in the 10-30 micron

range. This includes innovative air separation mills which form part of a closed circuit to allow processing to be carried out under HACCP and GMP conditions. Recently facilities even for cryogenic grinding have been made available at the company's Schoeneck works. Customers are given the opportunity to have their materials cleaned, granulated and stored before being despatched to consumers. These different functions can all be performed as a single sequence of operations under one roof.
