

Metal detector meets HACCP requirements for food processing

Eclipse Magnetics, Sheffield, UK, has extended its range of metal detectors with the launch of the Artemis series, designed to ensure maximum product integrity combined with durability and ease of operation. Different models are available to suit a broad spectrum of applications. Artemis GFR is designed for free-fall or gravity-fed systems handling powders or granular materials. The Artemis TMDP and TMDC ranges are fully integrated systems designed for use with conveyor-fed lines. Suitable for use with both packaged and loose

products, they offer a wide choice of different tunnel aperture sizes to suit specific applications.

The Artemis range features the Interact+ control unit which incorporates a memory log for 1500 different events and 240 different product types. It also offers a built-in learn process to compensate for different product characteristics which may affect performance.
