

Eclipse launches site inspection service, appoints European sales manager

Eclipse Magnetics, headquartered in Sheffield, UK, a specialist manufacturer of vibratory sieves, magnetic separators and metal detection products, has introduced a dedicated site inspection service to help ensure long-term integrity for magnetic components. The company points out that, in line with HACCP procedures, it is vital that critical equipment such as magnetic separators is inspected regularly to ensure optimum performance. The Eclipse service team is qualified to carry out comprehensive inspection of magnetic equipment from any manufacturer, including visual appraisal and mechanical tests to monitor magnet performance. The service also provides examination of contaminant removal systems. All necessary certification and documentation are provided to meet requirements of external audits.

In a separate move, Eclipse has appointed Maxim Kireitseu as European sales manager to support growing demand for the company's magnetic separation/detection systems in key European markets. He is a qualified electromechanical engineer with 15 years experience in sales management and process engineering across a range of industrial sectors. His main focus will be on bulk processing industries such as food, pharmaceuticals, chemicals, plastics and recycling. www.eclipse-magnetics.co.uk
