

## ***Pneumatic unloading of dry bulk containers***

In addition to its Type CBL dry bulk container loader, Ehcolo based in Fovling, Denmark, can now supply the Type CTT 20-25t/h capacity pneumatic unloading system for consignees of containerised dry bulk cargo who do not have specialist tipping and receiving facilities. One of these systems has just been supplied to a customer for discharging fish meal and

another is currently being delivered to the United Arab Emirates for unloading cereals and soya bean meal from 20ft and 40ft containers. This latest order includes supply of a hydraulic tipping frame together with a separation filter, allowing product to flow directly into existing receiving hoppers.
