

Homogenizer especially suitable for high-viscosity products

Ekato Systems, Schopfheim, Germany, has recently launched the S-JET/V, the latest addition to its S-JET family of homogenizers. The machine was shown to the public for the first time at Interpack in May and was again featured prominently on the company's stand at Powtech last week. Thanks to increased pumping power and modified geometry of its rotor/stator system, the new model provides faster throughputs particularly for thickeners. This results in shorter batch times with no reduction in product quality.

An exclusive advantage of the S-JET/V is its ability not only to homogenise internally within the container, but also externally through a recirculation line. Through its strong pumping power (up to 2.5 bar gauge pressure) it also avoids the need for a separate pump. This provides advantages for manufacturing products with high densities, and additionally when it comes to emptying and cleaning of any residual product at the end of the process. www.ekato.com
