

## ***Machinery kept healthy by condition monitoring diagnostics***

Emerson Process Management, with European headquarters in Baar, Switzerland, has extended the monitoring capabilities of its CSI 9210 Machinery Health Transmitter. Designed to measure vibration, temperature and speed, the system can now be applied to all types of plant and mill rotating machinery including motors, fans, pumps and compressors. A component of PlantWeb digital plant architecture, the smart transmitter analyses the health of mechanical equipment through predictive diagnostics to improve plant availability and performance.
