

Accurate flow measurement of denatured alcohol

Emerson Process Management, with European headquarters in Baar, Switzerland, has installed Micro Motion Coriolis mass flow meters at the Faenza, Italy, plant of Caviro Distillerie, one of the country's leading agro-industrial groups. The installation is part of a project to upgrade the control and supervisory system at the plant, which produces wine and denatured alcohol as well as processing the by-products into agricultural chemicals. The flow meters were specially selected to meet the company's need for highly accurate measurement devices that are accepted by the regulatory authorities for fiscal metering of alcohol products.
