

Digital valve controller sales exceed one million

Emerson Process Management, with European head office in Baar, Switzerland, reports that it has sold over a million of its Fisher FIELDVUE digital valve controllers worldwide, since the product was launched in 1994. The company points out that a process control plant, regardless of industry, derives profitability based on how well it is able to minimise or eliminate variability and maximise uptime. By monitoring valves and enabling predictive maintenance, FIELDVUE instruments are designed to support both of these goals.
