

Eriez extends UK manufacturing facilities

Eriez Magnetics Europe has purchased a 19,000ft² building located adjacent to its existing production and administrative site in Caerphilly, South Wales. An expanded order base has resulted in heavier manufacturing demand and hence a need for more space. The enlarged factory floor area will not only increase Eriez Europe's manufacturing capacity, but will also allow for logistical improvements at the current site.

Managing director Paul Fears commented: "Despite the difficult economic climate, we have been able to continually increase our manufacturing output. We have received fantastic support from our headquarters in Erie, USA [Eriez Manufacturing Co] and this is a clear statement that competitive and successful manufacturing in the UK is a reality." The company plans to start production of magnetic separation and metal detection equipment in the new building by this April. www.eriez.com
