

A greener and more efficient alternative to the bulk bag pallet

Sonoco Alcore of Belgium has introduced the FirmaLoad bulk bag carrier which offers a cleaner, lighter and more cost-efficient alternative to traditional wooden pallets. They are made from 100% recycled paper and are 100% recyclable and repulpable. They offer two-way entry for forklift handling and are 82% lighter than comparable wood pallets. More than 1200 FirmaLoad units fit into a typical truckload, compared to only 540 wooden pallets, a space-saving feature which more than doubles shipping capacity. This translates into a 55% reduction in carbon emissions and 122% less requirement for storage space.

One of the main European distributors of this product is leading FIBC supplier Boxon of Willich, Germany. www.sonocotranspack.com;
