

### **Weigh batching from manual dump to rigid bin**

*(1 October 2007)*

UK-based Flexicon (Europe) has unveiled a novel food-grade weigh batching system designed by its US parent for transferring powder/granulate from a manual dump station to a rigid bin or IBC positioned below. The system is said to eliminate dust when material is tipped by hand from bags, boxes or other types of container. It de-lumps the material and feeds it gravimetrically from mezzanine level into a bin placed on a floor scale, allowing accurate batch weighs to be loaded.
