

Advanced box/drum tipper

UK-based Flexicon (Europe) has added the Box-Container Dumper to its Tip-Tite range of vessel dischargers. The unit, available in stainless or mild steel versions, can accommodate boxes and bins with lateral measurements from 915 to 1220mm and heights within the range 990-1120mm. The container platform is raised by a single hydraulic cylinder, creating a dust-tight seal between the top edge of a box (or rim of a drum) and the underside of the containment hood. Twin hydraulic cylinders then pivot the platform-hood assembly, together with container, to 45, 60 or 90 degrees beyond horizontal. There is a motion dampening feature at the completion of each tipping cycle.
