

Flexible screw conveyor for tight spaces

UK-based Flexicon (Europe) has introduced a compact wheeled flexible screw conveyor with tilt-down base. This facility allows it to be manoeuvred through narrow aisles and around corners as well as providing easy access for removal of the screw for cleaning or inspection. With the hopper, support boom and conveyor assembly tilted down, the unit can be moved through standard doorways. Each machine is customised according to discharge height, tilt-down height and discharge overhang to suit the dimensional requirements of individual applications. There is a wide choice of screw types for handling free flowing and problematic materials, including those that pack, cake, smear, plug or fluidise. The mobile conveyor frame is available in carbon steel or in stainless steel for sanitary use. www.flexicon.co.uk
