

Small-scale hygienic feeder for minor ingredient additions

Gericke, Regensdorf, Switzerland, has introduced the DIW-PE-GZD200 small-scale feeder suitable for feed rates within the 0.2-10 litres/h range. The modern weighing system ensures highly accurate feeding results in connection with the twin-screw GZD200 loss-in-weight feeder. The unit comes with specially polished surfaces, machined sealing grooves and has been designed for fast disassembly and easy cleaning. It can be equipped with wind protection, special connecting sleeves and vibration absorbers to reduce adverse effects on feeding accuracy caused by external influences. The weighing technology works fast enough in association with Gericke's Easydos Pro feeder controller to achieve the high demands made on short-term accuracy. www.gericke.net
