

Iron-free chocolate

(1 October 2007)

Goudsmit Magnetic Systems reports that chocolate producers in France, Germany, Belgium and the Netherlands have recently installed double-walled versions of its magnetic filters to remove very fine iron particles from liquid chocolate in accordance with latest HACCP hygiene requirements. The housing surrounding the magnetic separator is warmed with water at a temperature of 30°C to prevent the chocolate solidifying. www.goudsmit-magnetics.nl

*Twin-walled Goudsmit magnetic filter
traps even the smallest ferrous particles*
