

## ***Flexible screw conveyor for poor-flowing, food-grade products***

Hapman, Kalamazoo, MI, has introduced a version of its Helix™ flexible screw conveyors which is designed to provide hygienic handling of sluggish, food-grade bulk products. The Helix Hi/Lo model now features an optional mass-flow hopper that facilitates discharge of non free flowing materials without the need for separate in-hopper agitation. The hopper's

steep, conical shape helps promote flow of problematic materials, such as those with high moisture or fat content. Optional external vibration can be added to assist with material flow. The unit's novel design allows a single worker safely and easily to handle washdowns, auger changeouts and servicing all from floor level. It can convey to heights in excess of 3m and at rates up to around 0.7m<sup>3</sup>/min. It is available through the company's European distributor network.
