

Haver & Boecker expands explosion protection expertise

Haver & Boecker, headquartered in Oelde, Germany, in December received EC type examination certificates for its FFS bagging systems and net weighers from German certification agency Dekra Exam. This means that the time-consuming and costly single examination by a certification agency is no longer required, because authorised Haver & Boecker staff are now able to approve by themselves standard machines for use in explosion protection zones. In future Dekra Exam will only need to conduct annual monitoring of production quality assurance. This will result in a considerable reduction in organisational effort and the expense of individual examinations. www.haverboecker.com
