

Rotary sack packers for new Vietnamese cement plant

Haver & Boecker, Oelde, Germany, has won a contract to supply four of its new ROTOCLASSIC® 8 RCC packing machines to Cong Thanh Cement for a production plant currently under construction at Thanh Hoa, Vietnam. Included in the scope of supply are two cement and raw mix silos from Haver's subsidiary IBAU Hamburg. A special feature of this order is that all sheet metal parts, such as pipes and hoppers, will be fabricated locally

by BTC Company in Ho Chi Minh City. The compact ROTOCLASSIC offers many advantages in terms of high performance and ease of maintenance. Thanks to its modular design each filling module is in itself practically a fully functional single spout machine and, for maintenance purposes, a single module can be removed while still allowing the remaining machine to continue packing.
