

## ***Vacuum conveying for hygienic applications***

Hecht Technologie, Pfaffenhofen, Germany, has developed the ProClean® Conveyor which offers quick and simple maintenance and filter replacement thanks to an easily accessible cover. There is no need to disassemble connections. For the first time it is possible for the operator to observe the filling level directly through a sight glass in the housing cover. Key features of this vacuum conveying system are its small space requirement, excellent discharging of residues and CIP cleanability. It is particularly suitable for toxic, sensitive or solvent-moist powders and granules. [www.hecht.eu](http://www.hecht.eu)
