

Granulator for plastics recycling

Amongst new equipment launched by Herbold Meckesheim at the Fakuma trade fair which takes place 13-17 October in Friedrichshafen, Germany, will be the SML 60/100 SB granulator featuring forced feeding by means of transfer screws. This type of machine offers up to 50-100% higher throughput performance compared to gravity-fed units. Typical applications are processing of PET bottles and secondary size reduction of pre-shredded waste. www.herbold.com
