

Cartridge filter for toxic dusts

Infastaub, Bad Homburg, Germany, part of the Intensiv-Filter Group, has introduced the INFA-MICRON MPR cartridge filter which features a novel 'safe change' capability to prevent the risk of operating staff coming into contact with noxious dust from inside the filter during change-over. Apart from this important safety feature, an efficient cleaning system with permanently low differential pressure has been designed to guarantee good cleaning results, even with very sticky dusts.

The new filter will be featured on the company's stand (9-658) at Powtech where the 'safe change' feature will be demonstrated to visitors three times a day, at 10 am, 12 pm and 3 pm. Head of sales Jens Kampmeyer said that he expected the innovative dust removal technology to generate strong interest among trade visitors. www.infastaub.de
