

Ready-to-run rotary blowers

Kaeser Kompressoren, Coburg, Germany, has introduced the Models CB 111 C and CB 131 C rotary blowers which are supplied connection-ready with integrated mains power supply equipment and monitoring. They deliver from 4.7 to 12.5 m³/min at up to 1000 mbar(g), or 500 mbar (vacuum). Key applications include pneumatic conveying of bulk materials and aeration of sedimentation tanks. These blowers can be supplied ready for operation including all sensors and star-delta starter, or Omega Frequency Control (OFC) for flexible speeds. The complete system packages are CE and EMC certified, which means less work for both the operator and system provider when it comes to planning, installation, certification, documentation and commissioning. A range of motors is also available to accommodate various performance requirements, whilst noise and pulsation reduction measures ensure quiet operation. www.kaeser.com
