

### ***Low-profile, high-capacity classifier***

Kason, Milburn, NJ, has introduced a new Vibroscreen® Flo-Thru screener. Available through Kason Corporation Europe, Stoke-on-Trent, UK, it is built to the same basic design as the company's K49-1FT-SS Flo-Thru hygienic sifter introduced last year (see Industry News for week of 15 November 2010). Employing two screening decks, it is available in diameters from 460 to 2135mm and can meet 3-A, FDA, BISSC and other sanitary standards as well as UL, ATEX, CSA and CE electrical standards. Quick-disconnect clamp ring assemblies allow removal of screen frames for inspection, cleaning and screen changes. An optional Air-Lift device pneumatically raises either of the upper two screen frames, enabling one operator to rapidly perform what was previously a two-person task, depending on screen diameter.
