

Extended range of cantilevered centrifugal sifters

Kek-Gardner, Macclesfield, UK, has brought out the K1100C cantilevered sifter which offers throughputs up to 70t/h. Previously the product series went from laboratory-scale units up to the 40t/h capacity K800C. They provide users with high standards of hygiene and ease of operation, being suitable for a variety of applications including classifying and dedusting. This extension to the range offers customers high-capacity sieving with the added benefits of the cantilevered design, notably reduced downtime for cleaning and maintenance.
