

## ***Food-grade receiver for problematic powders***

K-Tron (Switzerland), Niederlenz, has redesigned the K-Tron Premier P30 receiver for applications requiring high levels of hygiene when conveying powders with difficult flow characteristics. Being of modular construction, it can accommodate various discharge options, quick disassembly for cleaning (including jet filter cleaning) and volume extensions. Its versatility has been enhanced with the introduction of extension modules to increase the receiving volume of bulk materials. Other improvements include easier disassembly for cleaning, a new sealing and earthing feature, and a more user-friendly design. The all stainless steel unit, which meets cGMP sanitary requirements, can convey up to 1800kg/h. Steep cone angles ensure reliable discharge.
