

## **Systems engineering solutions at K-Show**

K-Tron, Niederlenz, Switzerland, will be featuring the capabilities of its new Systems Engineering Group at the K-Show in October (Stand B73, Hall 10). On display will be several stations integrated into one complete system. For example, one of the stations will feature a 2415 K-Tron Premier vacuum receiver on top of a KT35 twin screw feeder fitted with an ActiFlow bulk solids activator. Another station features an FB130 loss-in-weight belt feeder with a K-Tron Premier P10 vacuum receiver. Other elements of the system include a bag dump station, PD vacuum blower with housing and 2400 Series filter group. The company explains that in a modern production line centred around high-precision feeding equipment, operators are looking not just to reduce the number of vendors involved, but are ultimately seeking cost-effective and easy-to-maintain solutions.
