

Knife gate valves for abrasive slurries

To complement its well established family of pinch valves, Larox Flowsys of Finland has launched a new series of heavy-duty knife gate valves which are well suited for applications involving abrasive or corrosive slurries. They feature a robust stainless steel gate, on either side of which are removable seats providing a bi-directional bubble-tight seal. They are suitable for use in the chemical industry as well as for sand and gravel handling and mineral processing. www.larox.fi
