

Laboratory mixing granulator

Gebr. Lödige Maschinenbau, Paderborn, Germany, has introduced a laboratory mixing granulator of completely new design. The machine is equipped with four interchangeable vessels with capacities within the range 1-15 litres. Each vessel includes its own shaft and can be easily and rapidly replaced without use of any tools. The unit, which features advanced electrical controls, is suitable for laboratory trials as well as for processing small batches.

It will be shown on the Lödige stand (6-256) at Powtech where the company will also be unveiling other innovations, including a newly developed mixing chopper mechanism especially suitable for dispersing high-density agglomerations. www.loedige.de
