

Rotating-paddle indicators measure milk powder levels

Leading German dairy group Nordmilch AG is currently using about 80 level indicators at various of its locations for monitoring the content of its milk powder silos, supply and reservoir tanks, and drying towers. The MBA 200 rotating-paddle indicators have been supplied by MBA Instruments GmbH of Quickborn, Germany, which is part of the SMB Group. At the beginning of October 2008 in a management buy-out the company took over the filling level measurement equipment division of Maihak AG, which since 2000 had belonged to the process automation segment of Sick AG. www.mba-instruments.de
