

## ***Simultaneous dosing of up to nine components***

Mann+Hummel ProTec of Bensheim, Germany, a specialist supplier of materials handling equipment and components for the plastics industry, has upgraded its SOMOS Gramix S9 gravimetric dosing and mixing system which is now equipped with a completely new control with highly dynamic weighing electronics. It can dose up to nine components simultaneously and thus provide the processing machine with a continuous and longitudinally homogeneous mass flow of up to 2500kg/h in accordance with the recipe. It can even manage exact dosing at flow rates of only 200g/h (little more than 3g/min). [www.mh-protec.com](http://www.mh-protec.com)
