

## ***Consistent particle size measurement for the cement industry***

UK-based Malvern Instruments has launched the Insittec Cement LabSizer which is designed to deliver reliable particle size measurements within the challenging environment of cement plant laboratories. Capable of accurately processing large-volume dry powder samples, it is especially suitable for the fully automated laboratories that are common within the industry. Characterising particle size and size distribution by laser diffraction offers a cost-effective, accurate and robust means of determining cement quality and strength.
