

Easier integration of analytical devices with advanced control systems

UK-based Malvern Instruments at the end of April launched Malvern Link II, a new and powerful OPC-standardised software package which has been designed to provide a valuable tool for system integration engineers, reducing the cost of upgrades and future maintenance. Using the latest OPC protocol (www.opcfoundation.org), Malvern Link II transforms analyzer integration for automated control from being a costly, bespoke task for each individual plant to a more rapid, routine and cost-effective procedure. It is fully compliant with pharmaceutical industry requirements. www.malvern.com
