

5th Queen's Award for materials characterisation company

On 3 September, Malvern Instruments was formally presented the 2010 Queen's Award for Enterprise in Innovation. The ceremony took place at its Malvern, UK, headquarters and was attended by employees from all parts of the organisation. This is the company's fifth Queen's

Award and this year recognises its continuous development of the market-leading Zetasizer Nano particle characterisation systems. The Zetasizer Nano makes highly sophisticated technology accessible to users from different backgrounds with varying levels of expertise. Automation and software-driven measurement help ensure that the system is universally easy to use, for applications ranging from cutting-edge drug research to routine quality control. www.malvern.com
