

## ***Mauser opens new IBC line in the Netherlands***

Mauser Group, a worldwide leader in industrial packaging, has opened a new IBC (intermediate bulk container) production line at the plant of its Dutch subsidiary, Mauser Benelux BV. A complete line, including new multilayer blow moulding machinery, has been installed at the Oosterhout facility where open-top drums, L-ring drums and small plastic packaging for distribution within the Benelux region are also produced.

The plant will now be able to produce the complete Mauser SM IBC portfolio, which includes SM EX IBCs for use in explosive zones and the SM LP model with specific light protection capabilities. Dr Jürgen Scherer, Mauser Group's SBU manager Europe, commented: "We see an increasing demand for IBC solutions in the region. By opening a new IBC line, we are able to respond faster to customers' needs. Furthermore, this enables Mauser and our customers to reduce environmental impact due to the transport of empty packaging." Mauser Group has its global headquarters in Brühl, Germany.
