

## ***Static grounding systems gain Chinese approval***

The Earth-Rite series of hazardous area static grounding systems has recently been approved by China's National Supervision and Inspection Centre for Explosion Protection and Safety of Instrumentation (NEPSI). The systems are made by Newson Gale

headquartered in Nottingham, UK, and are widely used by worldwide chemical processing industries to safeguard against the risk of uncontrolled electrostatic discharge in atmospheres containing flammable gas, liquid vapour or combustible dust.

The new NEPSI approval covers the whole range of Series II Earth-Rite systems suitable for grounding conductive items including road tankers, rail tankcars, drums, (F)IBCs, totes and other mobile vessels and containers. This latest certification augments existing IECEx, ATEX and CSA/US approvals.
