

## ***Monitoring safe grounding of multiple items***

Newson Gale, Colwick, Nottingham, UK, has introduced the new IECEx/ATEX-certified Bond-Rite REMOTE EP static earthing system which can simultaneously provide continuous monitoring of up to 10 separate items of plant equipment considered to be at risk of accumulating hazardous electrostatic charges in potentially flammable or combustible atmospheres. Suitable for mounting in Zone 2/22 atmospheres, it provides the option of bonding equipment for processes that last six hours or longer, including those that require continuous static earthing.
