

## ***New generation of static-grounding systems***

Newson Gale of Colwick, Nottingham, UK, has introduced its next generation of ATEX and IECEx certified Earth-Rite hazardous area static grounding systems. They feature a cluster of bright pulsing green LEDs which provide very clear indication to personnel that a positive ground condition is established for the duration of a potentially hazardous transfer process (such as loading or unloading flammable liquids). The upgraded and enhanced features of the new Earth-Rite RTR and Earth-Rite PLUS models represent a major advance in static grounding technology. [www.newson-gale.com](http://www.newson-gale.com)
