

New cable reel option for static electricity grounding devices

Newson Gale, headquartered in Colwick, Nottingham, UK, has introduced the VESM02 self-retracting option for its range of hazardous area static grounding systems. This offers a rugged and versatile alternative to spiral retractable cable for the company's range of Earth-Rite systems which are typically used to ground road tankers, railcars, mobile tanks, IBCs,

drums and other conductive plant items especially in outdoor locations where the cable may be exposed to rough treatment when not in use. The VESM02 reel has been assessed and approved in accordance with ATEX requirements for installation in Zone 1 (flammable gas/vapour) and 21 (combustible powder/dust) when connected to any Earth-Rite grounding system with certified Intrinsically Safe monitoring circuit output.
