

Safety clamp for polyurethane powder transfer hose

(15 October 07)

Norres Schlauchtechnik of Gelsenkirchen, Germany, working in association with RS Roman Seliger is believed to be the first manufacturer to develop a safety clamp system that accommodates wire-reinforced PU hoses. A major application will be loading and unloading powders and granulate to and from road and rail tankers. It will be unveiled at this month's K-Show in Düsseldorf. www.norres.de
